Engineering for a better

Wednesday, 21st of January, Overview

Time	Auditorium 15	Auditorium 10	Auditorium 11	Auditorium 12	Foyer	
	(582 seats)	(310 seats)	(310 seats)	(310 seats)	•	
08:30 - 09:30		Registration & Coffee				
09:30	Welcome &					
_	Keynotes					
11:00	Session 1-1					
11:00 – 11:30		Coffe	e Break			
11:30	Panel Discussion I	Compressor developments	Heat Exchanger Developments	Advanced system developments		
12:30	Session 1-2A	Session 1-2B	Session 1-2C	Session 1-2D	Posters,	
12:30 – 13:40	Lunch				Networking	
13:40 - 15:00	Poster Pitches Session 1-3A	Compressor developments Session 1-3B	Integration Concepts and applications Session 1-3C	From R&D to commercial products Session 1-3D	& Exhibition	
15:00 – 15:30		Coffe	e Break			
15:30 _ 16:50	Large-scale HTHP systems and applications Session 1-4A	Compressor developments Session 1-4B	Medium-scale HTHP systems & applications Session 1-4C	Smart integration and operation Session 1-4D		
16:50 - 18:00	Poster Session and Networking Session 1-5A					
18:00 – 19:00	Transport to Carlsberg Byen and Networking					
19:30	Dinner at Madklubben – Home of Carlsberg					

Thursday, 22nd of January, Overview

Time	Auditorium 15	Auditorium 10	Auditorium 11	Auditorium 12	Foyer	
	(582 seats)	(310 seats)	(310 seats)	(310 seats)		
08:00 - 09:00		Registration & Coffee				
09:00 - 10:20	HTHPs for drying applications Session 2-1A	Steam generation and compression systems Session 2-1B	HTHP Projects – From concept to realization & operation Session 2-1C	Reversible & heat— driven systems Session 2-1D		
10:20 - 10:50		Coffee	Break			
10:50 - 12:10	Large-scale systems and applications Session 2-2A	Steam generation and compression systems Session 2-2B	HTHP Projects – From concept to realization & operation Session 2-2C	Development and test of medium-scale systems Session 2-2D	Posters,	
12:10 - 13:15	Lunch			Networking		
13:15 – 14:15	Panel Discussion II Session 2-3A	Steam generation and compression systems Session 2-3B	Development, test and application of CO ₂ systems Session 2-3C	Development and test of medium-scale systems Session 2-3D	& Exhibition	
14:15 – 14:45	Summing Up Session 2-4A					
14:45 – 15:15	Break					
15:15	Sector Collaboration Workshops					
_ 17:00	Textiles Session 2-5A	Chemicals Session 2-5B	Pulp & Paper Session 2-5C	t.b.d. Session 2-5D		

Wednesday, 21st of January, 09:30 – 13:40

Time	Auditorium 15	Auditorium 10	Auditorium 11	Auditorium 12	
	(582 seats)	(310 seats)	(310 seats)	(310 seats)	
08:30 - 09:30	Registration & Coffee				
	Welcome Session Session 1-1 Session Chair: Benjamin Zühlsdorf (DTI)				
	This session will discuss what's ahead with a focus on how to bring systems into application. Stakeholders with different views on the value chain will share their key takeaways and considerations for future activities.				
	Presenters will be announced shortly.				
11:00 - 11:30		Coffe	e Break		
	What's driving the market? Session 1-2A Session Chair: t.b.d.	Compressor developments Session 1-2B Session Chair: t.b.d.	Heat Exchanger Developments Session 1-2C Session Chair: t.b.d.	Advanced system developments Session 1-2D Session Chair: t.b.d.	
		Compressor Development for High Temperature Heat Pumps, <u>M. Sundström</u> (SRM)	Design of Heat-Exchangers for High- Temperature Heat Pumps, J. V. Bael (VITO), S. Vermani (VITO), N. Anand (VITO), C. De Servi (VITO, Delft Uni)	Adapted diffusion bonded rotor design of the Rotation Heat Pump for very high temperatures up to 200°C, <u>E. Babaei</u> (Ecop), <u>A.</u> Längauer (Ecop)	
11:30 - 12:30	This session will discuss the main drivers for the industrial heat pump market, and how the uptake can be accelerated even more. Various stakeholders from across the value chain will join to share their view on the topic.	Oil-Flooded Screw Compressors in High- Temperature and Large-Scale Heat Pumps: Assessing Oil Heat Recovery and Efficiency Impact, H. Trumpf (TU-Dresden), Y. Xu (TU- Dresden), K. Klotsche (TU-Dresden), C. Thomas	High temperature Industrial heat pumps benefit from new plate heat exchanger technology, <u>R. Faber (</u> Alfa Laval), <u>T. Ångbäck</u> (Alfa Laval)	A novel Stirling engine implementation based on a fast liquid piston for ultra high-temperature heat pump applications, A. Klochko (Airthium), C. Grimaldi (Airthium), G. Lavabre (Airthium), O. Atbir (Airthium), H.	
	Participants will be announced shortly.	(TU-Dresden) Design principles for a hermetic oil free	Enhanced Heat Transfer Solutions for Efficient	Houssein (Airthium) Superheated Steam from Low-Temperature	
		centrifugal compressor for high temperature heat pumps, <u>A. Uusitalo</u> (LUT), T. Turunen- Saaresti1 (LUT), J. Narsakka (LUT), J. Nerg (LUT), N. Nevaranta (LUT)	and Compact High Temperature Heat Pump Applications, J. Dietl (Wieland-Werke), J. El	Waste Heat: A Brief Technical Overview of The Open Oscillatory Approach, L. Thorgeirsson (Hydram), A. U. B. Ardal (Hydram), R. L. Rosenbæk (Hydram)	
12:30 - 13:40		Lu	nch		

Program of the 5th HTHP Symposium

Wednesday, 21st of January, 12:30 – 16:50

Time	Auditorium 15	Auditorium 10	Auditorium 11	Auditorium 12		
	(582 seats)	(310 seats)	(310 seats)	(310 seats)		
12:30 - 13:40	Lunch					
13:40 - 15:00	Poster pitches Session 1-3A Session Chair: t.b.d.	Compressor developments Session 1-3B Session Chair: t.b.d.	Integration Concepts and applications Session 1-3C Session Chair: t.b.d.	From R&D to commercial products Session 1-3D Session Chair: t.b.d.		
	This session comprises short pitches of each poster showcased in the poster area. It will thereby give you an effective overview of all posters and inspiration of what posters you might want to visit in the poster session.	Maximizing the Potential of Industrial Heat Pumps: Efficient Solutions for Versatile Applications, <u>C. Beaussart</u> (BITZER)	Steam Cogeneration Heat Pumps for the Food, Dairy and Meat Industries, <u>T. G. Walmsley</u> (Waikato Uni) et al.	Examples of the technology path from prototypes and transfer projects to the market for industrial High-Temperature Heat Pumps, E. Jende (DLR), P. Stathopoulos (DLR), S. Klöppel (DLR), V. Dalal (DLR), M. Kriese (DLR)		
		Compression Technologies for High-Temperature Heat Pumps: Design and Test Challenges, <u>G.</u> <u>Pisano (</u> DORIN)	Electrifying Breweries with Heat Pumps: From Integration Options to Investment Decisions, R. Padullés (DTU), J. Walden (DTU), M. P. Andersen (DTI), J. K. Jensen (DTU)	Experimental evaluation of direct steam generation in High-Temperature Heat Pump Test Bench with natural refrigerants, <u>S. Benkert</u> (Fraunhofer), U. Wittstadt (Fraunhofer), et al.		
		Complete Compressor Solutions for High- Temperature Applications and Sustainable Heating, K. Nourrice (FRASCOLD)	Integration concepts for HTHPs in ammine-based carbon capture systems, S. Pathiraja (DTI), F. D'Ettorre (DTI), A. Zink (DTI), B. Zühlsdorf (DTI)	Henninger (JCl), S. Benkert (Fraunhofer), U. Wittstadt (Fraunhofer), et al.		
		High Temperature heat pumps with Butane in the industry, <u>T. Hamacher</u> (SPHeat)	Data-Driven Assessment of an R600 High- Temperature Heat Pump Integrated with Amine- Based Carbon Capture, <u>M. Bless</u> (SINTEF), T. Mejdell (SINTEF), et al.	Experimental Investigation of Propane/Butane Mixtures for Heating Grids, M. Wördemann (TU- Dresden), Y. Xu (TU-Dresden), C.Thomas (TU- Dresden), V. Venzik (Viessmann)		
15:00 – 15:30						
	Large-scale HTHP systems and applications Session 1-4A Session Chair: t.b.d.	Compressor developments Session 1-4B Session Chair: t.b.d.	Medium-scale HTHP systems and applications Session 1-4C Session Chair: t.b.d.	Smart integration and operation Session 1-4D Session Chair: t.b.d.		
	Large-scale cascade heat pumps for steam generation – From concept into application, <u>Thomas Staude</u> (Everllence)	Greensteam, steam-generating high temperature heat pump development with TurboClaw®-compressor technology, <u>T. Taylor</u> (Futraheat), R. Cattell (Futraheat)	Breaking the 100°C Barrier: Advanced Ammonia Heat Pump System for High-Temperature Industrial Applications, <u>V. Shah</u> (Copeland)	Benchmarking HTHPs and electric boilers with thermal energy storage: The impact of electricity price dynamics, <u>W. B. Markussen</u> (DTI), M. H. Christensen (DTI), B. Zühlsdorf (DTI)		
	From Wastewater to Steam: A Real-World Case of Engineering the First 170°C Heat Pump in the Pulp & Paper Sector, <u>D.Rizzi</u> (Turboden), E. Pingaro (Turboden)	Near-Isothermal compressors for High- Temperature Heat Pump applications, <u>A. W.</u> <u>Anderson</u> (HotGreen), G. Ware (HotGreen)	Piston-Based High-Temperature Heat Pump Technology for Industrial Decarbonization, <u>A.</u> <u>Bechem</u> (HEATEN)	From Concept to Practice: Web-Based Tools and Dynamic Simulation for Industrial High- Temperature Heat Pumps, <u>M. Gräber</u> (TLK), <u>E.</u> <u>Lanzerath</u> (TLK), M. Schmidberger (TLK), et al.		
	Large-scale heat pumps for steam generation to decarbonize industrial process heating (tbc.), \underline{M} . $\underline{Cameletti}(\text{Exergy})$	Measured High Performance of Novel Rolling Piston Compressor for High Temperature Heat Pumps (HTHPs), I.S. Akmandor (Pars Makina), R. Christodoulaki (CRES), et al.	Ammonia-water heat pumps with solution cycle – perfect for applications with high temperature spreads, <u>K. Ramming</u> (AGO), M. Zengerle (AGO)	Dispatch optimization of a high-temperature heat pump in a Direct Air Capture process, R. Sager (RWTH), N. H. Petersen (RWTH), M. Wirsum (RWTH)		
	Turning Industrial Waste Heat into Value – Enabling Carbon-Free Steam with CompriVAP- MVR Technology, J. Grassauer (GIG Karasek), M. Schmid (GIG Karasek)	A Novel Compressor Design Enabling Enhanced Temperature Lift and Efficiency in Single-Stage High-Temperature Heat Pump, <u>L Fenton</u> (FeTu), J. Subert (FeTu), A. Pearson (Star Ref)	Decarbonizing Industrial Spray Drying with High- Temperature Heat Pumps: Insights from the GEA AddCool® Demonstrator, R. Bergamini (GEA), D. Martinez-Maradiaga (GEA)	Economic Optimization of Industrial Heat Electrification: Integrating Heat Pumps and Phase Change Thermal Storage for Steam Generation, <u>F.</u> <u>D'Ettorre</u> (DTI), D. R. Nørhave (DTI), W. B. Markussen (DTI), et al.		

Thursday, 22nd of January, 09:00 – 13:15

High-Temperature **Heat Pump Symposium**

Copenhagen

			T	
Time	Auditorium 15	Auditorium 10	Auditorium 11	Auditorium 12
	(582 seats)	(310 seats)	(310 seats)	(310 seats)
09:00 - 10:20	HTHPs for drying applications Session 2-1A Session Chair: t.b.d.	Steam generation and compression systems Session 2-1B Session Chair: t.b.d.	HTHP Projects – From concept to realization & operation Session 2-1C Session Chair: t.b.d.	Development and test of medium-scale systems Session 2-1D Session Chair: t.b.d.
	Optimization of drying processes for integration of heat pumps, M. P. Andersen (DTI), C. Tammone (DTI), H. Madsbøll (DTI), J. L. Poulsen (DTI), B. Zühlsdorf (DTI)	Steam compressors or Closed-Cycle High Temperature Heat Pump (HTHP)? – Efficiency and Market-Ready Solutions in Comparison, <u>C.</u> Arpagaus (OST), F. Bless (OST), L. P.M. Brendel (OST), et al.	From Potential to Performance: Integrating High- Temperature Heat Pumps into Complex Process Industries , <u>A. Arva</u> (PMI), <u>M. Tukker (</u> JOA)	Development of modular hydrocarbon-steam high-temperature heat pumps with different compressor technologies (MIGHT-HP), P. J. E. <u>Delêtre</u> (DTI), J. Kristófersson (DTI)
	Energy-Efficient Fishmeal Drying Using High- Temperature Heat Pumps and Superheated Steam, <u>O. Flesland</u> (Pelagia), A. Høeg (Enerin), A. Brækken (SINTEF), P. Verma (Swedish Exergy)	Evaluating Steam-Generating Heat Pumps for Industrial Waste Heat Recovery: Overcoming Technical and Economic barriers in a Chemical Case Study, N. Pouransan (Syngenta), et al.	Advancing High-Temperature Heat Pumps in the industrial sector: Challenges, Innovations, and Implementation Pathways, Tom Marren (Astatine)	A Natural-Refrigerant Heat Pump Prototype for Steam Generation above 150°C, <u>M. Ramirez</u> (TNO), G. O. Rodriguez (TNO), R. de Smidt (TNO), U. Timurçin (TNO), S. Spoelstra (TNO)
	From Bricks to Boards: Full-Scale Superheated Steam Dryers with High-Temperature Heat Pumps Commissioned in 2025, <u>C. Nijssen</u> (CEE)	From Waste Heat to Steam: A Case Study on a Process-Integrated MVR Steam Generating Heat Pump in the Chemical Sector, O. P. Ruiz (Piller), J. Lim (Piller), J. Choong (Piller)	From Concept to Installed Reality: Process Integration and Delivery Lessons for Industrial Heat Pumps, <u>A. Karnik</u> (Ramboll)	Solution examples for cooling and process heating in industrial applications, Ivan Rangelov (Danfoss)
	Scalable and Modular Heat-Pump Drying Systems for Industrial Electrification, M. R. Bøgild (Circular Energy), J. Bendsen (Circular Energy), C. Bay (Circular Energy)	Steam Generating Heat-Pumps complemented by Steam Compressors in the paper industry, E. Touliankine (Heatlift), O. P. Ruiz (Piller), et al.	On the impact of fluid property data on safety equipment and performance estimates for high temperature heat pumps, J. Wronski (Clean Heat), K. Fredslund (Clean Heat)	Advancing Air-Sourced High-Temperature Heat Pumps for Industrial Steam Decarbonization, <u>A. Odukomaiya</u> (AtmosZero), N. Roberts (AtmosZero), W. Arthur-Arhin (AtmosZero), et al.
10:20 - 10:50		Coffee	e Break	
	Large-scale systems and applications Session 2-2A Session Chair: t.b.d.	Steam generation and compression systems Session 2-2B Session Chair: t.b.d.	realization & operation Session 2-2C Session Chair: t.b.d.	Development and test of medium-scale systems Session 2-2D Session Chair: t.b.d.
10:50 - 12:10	Traveling in time with Atlas Copco: Design and operational insights from 40 years in large heat pumps, R. Rubycz (Atlas Copco), H. Behnoud (Atlas Copco)	AHEAD - Pioneering CO ₂ -Free Steam Without Gas Challenges and Experiences in Producing Chilled Water (6°C), Heating Water (70°C), and Steam (184°C) with Natural Refrigerants, <u>H. Erös</u> (Takeda), D. Hofbauer (Takeda), et al.	Development and Integration of Steam Producing High-temperature Heat Pump in the Sugar Industry, J. L. Poulsen (DTI), E. N. Pedersen (DTI), O. Fredrich (GEA), B. Aerts (Tiense)	Experimental Study on Optimizing Energy Efficiency in a Steam-Producing Heat Pump System with Waste Heat Recovery, <u>M. Enge</u> (TU- Dresden), T. Wemer Moesch (Combitherm), K. Klotsche (TU-Dresden), C. Thomas (TU-Dresden)
	Testing the world's largest CO₂-based sea water heat pump, <u>Z. Antonini</u> (Everllence)	Waste heat upcycling from superheated steam dryer by high-efficient HTHP with cycle fluid steam R718, <u>B. Feuerriegel</u> (Lübbers)	SPIRIT demo case I: Full-scale on-site demonstration of a cascade industrial heat pump producing steam at 145 °C, G. O. Rodriguez (TNO), W. de Vries (TNO), M. Ramirez (TNO), et al.	Steam generation with heat upgrade technologies - Laboratory tests and demonstration in the industry, <u>L. Alonso</u> (TECNALIA), M. G. de Arteche (TECNALIA), et al.
	HTHP at Berlin City Center: Detailed Test Results and Experiences from Real-World Operation, G. Balyaligil (KTH, Siemens), S. Sawalha (KTH), J. Schafer (Siemens), K. Moritz (Siemens), et al.	R718 heat pump for efficient supply of 4.4 MW steam: Insight and first-hand experience, <u>M.</u> <u>Bantle (</u> Aneo), C. Schlemminger (Aneo), K. Evenmo (Epcon), C. I. Gotaas (Epcon)		High-Temperature Butane Heat Pump for the R&D project EcoHeat Revolution, <u>S. Beltman</u> (Dutek)
	Thermodynamic analysis of high-temperature heat pumps and their integration into geothermal energy systems, J. Jeßberger (Uni of Bayreuth), F. Heberle (Uni of Bayreuth), D. Brüggemann (Uni of Bayreuth)	Steam Generating Heat Pump at Pharmaceutical Plant , <u>A. Høeg (</u> Enerin), K. Løver (Enerin), I. Fløystøl (GE Healthcare)	Flexible heat sources while generating process steam above 150 °C – results from the "Decarbonization of European Dairy industry" project, K. Högnabba (Åbo Uni), T.M. Tveit (Åbo Uni, Olvondo), et al.	Development and testing of cascade HTHPs with hydrocarbons , <u>N. Ahlbrink</u> (DTI), J. L. Poulsen (DTI), B. Zühlsdorf (DTI)
	Lunch			
12:10 – 13:15	5	Lu	nch	

Program of the 5th HTHP Symposium

Thursday, 22nd of January, 09:00 – 13:15

Time	Auditorium 15	Auditorium 10	Auditorium 11	Auditorium 12	
Time					
	(582 seats)	(310 seats)	(310 seats)	(310 seats)	
12:10 – 13:15	Lunch				
	Looking ahead – Bringing technologies into application Session 2-3A Session Chair: t.b.d.	Steam generation and compression systems Session 2-3B Session Chair: t.b.d.	Development, test and application of CO2 systems Session 2-3C Session Chair: t.b.d.	Reversible & heat-driven systems Session 2-3D Session Chair: t.b.d.	
13:15	This session will discuss what's ahead with a focus	Development of HTHP based on steam as refrigerant and 4-stage oil free reciprocating compressor, <u>O. M. Moen</u> (SINTEF)	CoBra – A High-Temperature, Load-Flexible Brayton-Cycle Heat Pump Demonstrator, <u>A. P.</u> <u>Tran</u> (DLR), J. Oehler (DLR), F. C. Yücel (DLR), P. Stathopoulos (DLR)	Unlocking Value from Waste Heat: Energy Efficiency & Decarbonization without compromise, <u>T. De Vloo</u> (Qpinch), S. Rousseau (Qpinch)	
14:15	on how to bring systems into application. Stakeholders with different views on the value chain will share their key takeaways and considerations for future activities.	Development and design of a family of high- speed water based Turbo Compressors for MVR and heat pump applications , <u>M. Weel (</u> WSE- TURBO), J. Rehn (WSE-TURBO), M. Svanteson (WSE-TURBO)	Reverse Brayton HTHP application for drying processes in the paper industry: a case study, <u>S. Barberis</u> (Unige), A. Patti (Unige), A. Traverso (Unige)	Unlocking the potential of absorption heat transformer. The path to de-carbonization of steam generation., <u>D. Gorlovsky</u> (JCI)	
	Participants will be announced shortly.	Case Study: Development of Skyven's Arcturus Steam-Generating Heat Pump at an Industrial Facility, J. Saccone (Skyven), J. Strasser (Skyven)	Techno-economic analysis of a transcritical CO2 heat pump for a high-temperature drying application, J. Lagarde (SynchroStor), J. Oledzki (SynchroStor), A. Dole (SynchroStor), H. Simpson (SynchroStor)	Reversible large-scale heat pumps for district heating applications: First experimental characterization and design of a 200 kWel demonstrator, <u>C. Schifflechner</u> (TUM), A. Passamonti (TUM), et al.	
	Summing Up Session 2-4A Session Chair: Benjamin Zühlsdorf (DTI)				
14:15 - 14:45	This session will summarize the key takea ways from the Symposium and provide an outlook for the next years.				
14:45 – 15:15		Bro	eak		
	Sector Collaboration Workshops These workshops will focus on bringing all players for the specific sector together for discussing sector-specific solutions. The sector collaborations are organized of the IEA HPT Project 68 and are open for all participants				
	Textiles	Chemicals	Pulp & Paper		
15:15 -	Session 2-5A Session Chair: Sanduni Pathiraja (DTI) The session will feature presentations on the	Session 2-5B Session Chair: Fabian Ahrendts (Fraunhofer IEG)	Session 2-5C Session Chair: Panagiotis Stathopoulos (DLR)		
17:00	The session will feature presentations on the overall structure of the textiles sector and their decarbonization targets and supply chain dynamics, as well as technical solutions. Moreover, it will be discussed how to bring solutions into application most optimally.	This session will give an overview of the most promising heat pump applications in the chemical sector and discuss options for exploiting the potential.	This session provides an overview of the most optimal integration concepts for typical plant layouts and discusses what's missing to enable complete decarbonization of pulp and paper plants.		

Wednesday, 21st of January, from 16:50

	Poster Session and Networking – Part 1/2 Session 1-5A				
	 Heat pump integration A novel hybrid system for medium-temperature industrial steam: Techno-economic performance across European climates, P. Saini (DU, Absolicon) C. Arpagaus (OST), F. Bless (OST) An innovative tool for HTHP integration in industrial processes, A. Patti (Unige), S. Barberis (Unige), A. Traverso (Unige) Applications of the analytical solution to optimal heat pump integration, J. Walden (DTU), R. Padullés (DTU), J. K. Jensen (DTU) Optimizing paper drying with high-temperature heat pumps: Integration challenges and research directions, O. A. A. Awan (Modell Fabrik), J. Lunewski (Modell Fabrik), I. Kuperjans (NOWUM), P. Bekaert (Modell Fabrik) IEA IETS Task XXIV – Process Integration for Industry Decarbonization, S. Pathiraja (DTI), N. A. Kermani (DTU), R. Padullés (DTU), B. Zühlsdorf (DTI) 	 Steam Systems Design and Simulation of Reliable Desuperheating Methods for a Multi-Stage Oil-Free R718 Compressor for High-Temperature Heat Pumps, K. Banasiak (SINTEF), J. R. Dowdell (SINTEF), Á. Á. Pardiñas (ITG) Decarbonizing Industrial Process Heat: A geothermal R718 high-temperature heat pump for rubber and dairy facilities, V. Somasundaram (SDU), P. Gullo (SDU), O. Talluri (Uni Fi) Energy and Thermal Characterization of R744/HC Zeotropic Blends for High-Temperature Heat Pumps, K. M. Mesheshaa (Uni Lim), D. Newporta (Uni Lim), R. Grimesa (Uni Lim) High-Efficiency High-Temperature Heat Pumps with Refrigerant Blends for Temperature Glide Applications, L. P. M. Brendel (OST), C. Arpagaus (OST), P. Lemke (OST), N. Lüchinger (OST), S. Bernal (OST), S. S. Bertsch (OST)	Reversed Brayton cycles and CO2 cycles Steam Heat, CO2 High Temperature Heat Pump, L. Chordia (Thar), V. Vahdat (Thar), M. Portnoff (Thar), A. Amamath (Epri) Transcritical-Transcritical CO2 High-Temperature Heat Pump Cycle for Dairy Spray Dryers, R Engelbrecht (OST), C. Arpagaus (OST), S. Paranjape (OST), F. Bless (OST), D. Gstöhl (OST), L. Kong (Waikato), T. G. Walmsley (Waikato) Techno-economic assessment of Brayton cycle heat pumps for combined heating and coolin production in industrial frying processes, C. Vankelekom (Uni Mons), P. Stathopoulos (DLR), P. Demeyer (Engie), W. De Paepe (Uni Mons) Study of a reverse Brayton cycle heat pump for industrial applications, R. Gautier (CEA), T. Nicolas (CEA), K. Bhairapurad (Enogia), P. Dumoulin (CEA), M. Menoux (CEA), P. Bumier (Enogia) Investigation into the design and part-load behaviour of a high-temperature heat pump process using CO2 providing carbon-neutral industrial process steam, L. Steinberg (Ruhr Uni) GO2 High-Temperature Heat Pump for Vegan Cheese & Dairy Alternatives, C. Arpagaus (OST F. Bless (OST), S. S. Bertsch (OST), C. Maibach (Newroots) High-Temperature Heat Pump using CO2 as refrigerant for drying applications F. D. Holdt (DTI), J. L. Poulsen (DTI), L. Rasmussen (DTI), B. Zühlsdorf (DTI)			
18.00	Large-scale testing and demonstration Demonstration of HTHP for remote industry and grid integration (HEAT RIG), F. D. Holdt (DTI), N. Ahlbrink (DTI) Experimental Investigation of Large-Scale Hydrocarbon-Based HTHP Systems: Performance Evaluation of Isobutane and Butane with High-Capacity Piston Compressor TechnologyJ. Kristófersson (DTI), P. J. E. Delêtre (DTI)	Digitalization and advanced control systems Technical and Ecological Assessment of High-Temperature Heat Pumps with Model Predictive Control in Paper Manufacturing, C. Kötting (RWTH Aachen), F. Will (RWTH Aachen), L.asse Jöhnk (RWTH Aachen), H. Romberg (RWTH Aachen), N. Kalter (RWTH Aachen), M. Mersch (RWTH Aachen), C. Vering (RWTH Aachen), D. Müller (RWTH Aachen) Digital Services for High-Temperature Heat Pumps: Applications from Ongoing International Projects, J. J. A. Prado (DTI), K. R. Kramer (DTI)			
	Heat-driven systems Techno-economics of H2O / LiCl + ZnCl2 based Single Stage Absorption Heat Transformer, <u>R. Krishnadoss</u> (NTNU), M. Codemo (Uni Pd),T. A. Adams II (NTNU) Stirling heat pump for low and high temperatures with thermic operation, <u>G. Manolache</u> (Engineer)	Solid state technologies • High-temperature solid-state electrocaloric heat pump, <u>K. Klinar</u> (Univ. of Ljubljana), A. Kitanovski (Univ. of Ljubljana)			
	Advanced manufacturing methods • Leveraging Additive Manufacturing in the Development of Screw Compressors for High Temperature Heat Pumps, A. J. Hoess (Purdue), R. B. Barta (Purdue), E. A. Groll (Purdue), D. Ziviani (Purdue)				
18:00 – 19:00	Transport to Carlsberg Byen and Activities				
19:30	Dinner at Madklubben – Home of Carlsberg
